

## 14% INCREASE IN THE QUANTITY OF MILK DELIVERED IN THE FIRST 9 MONTHS OF 2024

 In the first 9 months of the year, the company saw a **14%** increase in the amount of milk delivered, compared to the same period in 2023.

 By maintaining a sustained pace of production and delivery, we recorded an monthly average of **5 million liters** of milk deliveries in the first 9 months of this year. This performance reflects our commitment to efficiency and quality, and aligns with our target for this year, to produce 60 million liters of milk.

 In September 2024 the amount of milk delivered increased with over **13%**, compared to September last year.

### DN AGRAR - Monthly Evolution of the Quantity of Milk Delivered 2024 vs 2023 (liters)

## Update

### DN AGRAR Projects

#### Work progresses on DN AGRAR Straja Farm

🐄 The project for the new farm in Straja is making progress. At the moment, the works are focused on the construction of the first rotor and the waiting room for the cows, before milking.

🐄 The stables for 1,120 animals are almost completed and equipped.

🐄 These constructions represent only a third part of the total project, indicating that the works are progressing.

**Find in the video below  
the DN AGRAR Straja farm works update** 

### **The activity on the compost factory will start soon**

 Due to international conflicts, we have been informed that there will be another delay in the delivery of the compost unit for the compost factory.

 The new deadline communicated is October 21st, when it will arrive in the Harbor of Constanta. After transportation and installation of the equipment at the DN AGRAR Apold farm,

estimated to take a few days, we expect to start the activity at the compost factory.

🌱 In the following period, i.e. November, December and partially January 2025, we will optimize the processes and finalize the recipe for the compost.

🌱 Our goal is to produce, in the first year, a quantity of compost between 6,000 and 7,000 tons of final product.

🌱 In recognition of our efforts to reduce carbon emissions through composting, we have started the process of obtaining voluntary carbon certificates, a process that will take approximately two years.

---

## DN AGRAR Activity

### No-till technology proves its efficiency!

🌱 No-till direct seeding has been successfully implemented, wheat has sprouted uniformly and vigorously, confirming that this method is a viable and beneficial alternative for agriculture.

🌱 By conserving soil and reducing erosion, we are confident that this technology will contribute to increase the sustainability of agricultural production and achieve very good results both in terms of quantity and quality, at least equal to those obtained using conventional technology.

🌱 Preliminary results are encouraging and support the viability of no-till technology in agriculture.

🌱 Voluntary certification of carbon sequestered in soil project is advancing. We are in the data inventory phase for the 2024 crops, on the next phase, the sequestered carbon will be calculated and the corresponding voluntary carbon certificates will be issued.
